

Article 2: Adolescent Internet Usage in Taiwan: Exploring Gender Differences

1. What is the third hypothesis?

Girls search for information on the Internet more often than do boys. (See lines 208–209.)

2. How many of the participants were 6th-graders?

290. (See line 225.)

3. What did the researchers conduct in order to develop the questions for their survey?

A focus group. (See lines 226–228.)

4. What percentage of the girls spent over 10 hours online?

5.0%. (See Table 1.)

5. Was there a significant difference between boys and girls in the perceived importance of the Internet? If yes, at what probability level?

No. (See lines 309–311 and Table 2.)

6. Was there a significant difference between boys and girls in the frequency of playing games on the Internet? If yes, at what probability level?

Yes, at the .001 level. (See Table 4.)
