

Figure 2.1 A Criminalist dusts for fingerprints.

Figure 2.2 Super Glue fuming to develop fingerprints. Fuming should be conducted in an airtight enclosure placed within a fume hood. The glue is poured onto folded aluminum foil heated by a mug warmer. Heated water is placed in the fuming chamber to aid in the development. In this picture, a knife is suspended in the fuming chamber above the mug warmer.

Figure 2.3 A fingerprint developed by Super Glue fuming.

Figure 2.4 Numbering system for the fingers of the left and right hands.
